	Examiner C. J. Arbes	Art Unit 3729	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3729

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 5, 6, 13-24 and 26-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan Pat No. 2002-223076, by Koju; hereinafter '076.

The '076 teaches applying a first conductive layer i.e. 6 and 7) onto a first carrier, applying a first dielectric or insulating layers (i.e. 4 and 5) onto the first conductive layer wherein the substrate includes a via, placing an embedded component e.g. a capacitor, wherein the component is placed in a vertical position (Cf. e.g. Fig. 1) in a via, applying a second conductive layer (i.e. 16), and placing a second dielectric or insulation layer (i.e. 18) on the second conductive layer. It would have been obvious, if indeed the '076 does not expressly teach the following; to wit, to provide a first and a second adhesive layer on the first and second dielectric in order to insure a cohesive and strong bonding of the dielectric laminates. As applied to claim 5 the adhesives recited in this claim are all well known in this art and therefore it is held to have been obvious to use any one of these adhesives for the step of applying the first adhesive layer. As applied to claim 14 Fig 1 of the '076 shows an interconnection between a conductive surface of the embedded component and one of the first and second conductive layers.

Art Unit: 3729

Claims 2-4, 7-12 and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
